

## **Lifetime Guarantee**

In order to show its confidence in the strong environmental credentials and sustainability of anodised aluminium, **United Anodisers introduces the Lifetime Guarantee**

A modern city centre building represents a huge investment, both in terms of land, planning, design and construction cost. In order to protect the value of that investment over the long term, guarantees are very important to both specifiers and building owners.

Guarantees are only of any value when they are straightforward, unambiguous and long term. This is only possible where the guarantee is backed by proven long term on-site performance

**Backed by an extensive study conducted by United Anodisers on the long term on-site performance of anodised aluminium - including in highly polluted and marine environments - United Anodisers has been able to introduce for the first time and exclusively a Lifetime Guarantee for the design life of the building cladding.**
